

Introduction to Environment Setup for Working with LLMs

- We have seen how to use both Local LLMs and Hosted LLMs through REST APIs in our AI-Powered Arithmetic Calculator.
- The first step in building AI applications with LLMs is setting up the LLM environment.
- The setup process is different for Local LLMs and Hosted LLMs.
 - Local LLMs require installing an LLM runtime, such as Ollama, and downloading the required LLM to your computer or server.
 - Hosted LLMs require creating an account with an AI provider or cloud AI platform and obtaining the necessary credentials, such as API keys or access credentials.
