

Working with Ollama Interactive Mode

- Ollama Interactive Mode enables us to interact directly with an LLM by sending prompts or requests from the terminal or command prompt.
- It is useful for testing, experimentation, and learning without writing code or using REST APIs.
- **How to Start Interactive Mode ?**
 - **ollama run <LLM_Name>**
- **How to Exit Interactive Mode ?**
 - **Ctrl + D or /bye**
- **Note:** Interactive Mode provides several built-in slash commands to manage the current session.
- Type `/?` or `/help` to view the commands supported by your installed version of Ollama.
